ted plants as beans and gourds and for the flat manioc flour cake, the *beijú*, are almost identical with the corresponding Kamayurá words.

The pre-contact history of the Trumaí is largely inferential and their recent history is poorly documented. The white explorers and scientists who visited the upper Xingú frequently did not encounter the Trumaí, and almost never visited their villages. Historical data indicate that in von den Steinen's time and possibly as late as the 1931 trip of Petrullo the Trumaí lived in two villages. Von den Steinen showed an abandoned Trumaí village, in substantially its present location, and another on the lower end of the Tsahuku, a network of waterways and lagoons west of and parallel to the Kuliseu River.[8] Although Meyer's map did not show this southern village in 1896,[7] it appears in Schmidt's map for 1901.[8] Petrullo encountered Trumaí, most probably of the southern village, on the west bank of the Kuliseu, between the locales of the Nahukwa and Mehinaku villages.[9] M. Moennich, one of a party of American missionaries who descended the Kuliseu in 1937, did not, however, note a Trumaí village near this site.[10] When Quain arrived in 1938 there was only one Trumaí village, which was located at the northern site. This would suggest that the southern village was abandoned in 1937–38, but it is possible that those Trumaí seen by Petrullo and Moennich were the same ones whom Quain visited.

The northern and southern villages mentioned in the literature are the only ones recorded. It is certain that since 1884 there have only been two communities, although each has been located in many different places. Unfortunately, the exact locations of the abandoned sites and their periods of occupation are not well known. Each of the old village locales had a name, and these designations are still known. Among them are Morena, Waniwani, Karajaja, Iakare, Jawpew, and Wahldat. Some of the names, such as Iakare, are obviously of Tupian origin. Jawpew was the name of the northern Trumaí village at the time of von den Steinen's expeditions. Karajaja was the last location before the one in which Quain resided. This site was located near the Kamayurá village on the Tsahuku and appears on Petrullo's map. The Trumaí said that it was a good village, but that they had to move because the Kamayurá and Auetí were practicing sorcery against them. The village to which they moved, and where Quain visited them, was named Anariatan.

People were often referred to by other Trumaí according to the village in which they were born. Thus, a *Wahldat jaxlo* was, literally, a son of Wahldat. Also, garden sites were most commonly named after an abandoned village. The old villages were looked on with reverence as the homes of the ancestors of the Trumaí. They were considered to be places of great interest, and Quain was repeatedly urged to visit them.

was working on the roof, the other thatched the wall facing the forest, and the house was subsequently occupied while work was still proceeding on that wall. The wall toward the village was temporarily hung with cloth drapes for privacy, although for purposes of protection from enemies the opposite side was thatched first. 342

Additional thatch was placed on the house at the beginning of the rainy season. At that time light poles were bound to the frame for greater support. The chief's house began to sag from the weight of the thatch, and braces had to be put under the ridge pole. Two posts, as heavy as the center posts, were crossed just below the ridge pole and bound together. A few men got behind each post and pushed so that the poles would assume a more nearly vertical position and give firmer support to the ridge poles. When this had been accomplished, the bases of the posts were set in holes. 342 335

Quain had the opportunity to observe two houses being constructed: his own and a fifth dwelling being built by two Trumaí men. His own small house took one week to build. The work started off with a great burst of effort, and in four hours all the wall posts, center posts and the ridge pole were in place. However, every day thereafter progress became increasingly slower. 123 342 461

House styles and construction were not rigidly conventionalized. The Trumaí helped build a house for the missionaries, Mr. and Mrs. Thomas Young, and they thought that Quain, being a *karaíba* (white man), would like one such as the Youngs had designed for themselves. When they were half finished with the frame, Quain realized what was happening, and asked for a haystack house like theirs. The revision was made easily and the result was a hybrid. This, added to the fact that two of the houses in the village were much larger than the other two, indicated a certain flexibility and willingness to imitate. The Kamayurá classified the different posts and poles that went into house building, but the Trumaí had only very broad terms for the corresponding parts. 123 341 [197] [192] [335]

The heavy work of raising the ridge pole, stepping in braces, and carrying and inserting center posts was done cooperatively. These joint labors, although brief and infrequent, made for a festive occasion and gave rise to laughter and gaiety, an unusual thing among the men. With the exception of operations requiring the combined efforts of more men, the house was built by the males who were to occupy it. Women took no part in the building. Yanahi and Mayuva, who were building a new house, shared the work unequally, Yanahi doing the larger part. They did not always work at the same time, and, when they did, they worked on separate sections of the house. 335 342 476 [462]

Quain's house was built cooperatively because he was an outsider, and it was the obligation of the whole community to accommodate him. 123 342 476 574

Necklaces were made by tying feathers to a cotton cord with *buriti* fibers. Headdresses included one consisting of a ring of cotton threads with colored feathers attached. The front feathers were long and formed a sort of plume. Another headdress, a feather topknot tied to a cotton headnet, was captured in warfare with the Caiabí. A third was a crown woven of bamboo splints traded from the Waurá for arrow feathers. There were probably many other kinds, as intertribal trade in headdresses was lively.

Belts and anklets were also traded between tribes. A few Brazilian type shirts and hats had found their way into the Trumaí village. They had been obtained from travelers in the region, and especially from the missionaries, Thomas Young and his wife.

The men wore their hair cut straight around the head on a line even with the tops of the ears. A small patch on the crown was plucked, but Quain noted that the Trumaí were much less careful about keeping these parts free of new growth than were the neighboring groups. The scissors which Quain gave to one of the men replaced the old method of hair cutting with an instrument made of *piranha* teeth. A composite comb (*kuwau*) was also used. The back was made of two parallel pieces of cane joined by cotton thread and the teeth of splints from the small roots of a palm-like shrub.

The Trumaí used several vegetable paints to decorate their bodies. This method of adornment was always invoked for ceremonies, and often for wrestling, or when there were guests. The paint most commonly used was the red *urucú* (*matdot*) which was grown in the gardens. The *urucú* was made into a paste by mixing it with oil from the visceral fat of a fish. The paste could be rolled into a ball and applied directly, or spread with the fingers or a spatula made from the middle rib of the *buriti* leaf.

Other body paints were *tawariri*, a black tree gum mixed with soot, and a preparation made from *piquí* fruit and fish oil. There was also a dye, *atdot*, which was not described, and one or two other paints which Quain was unable to identify. *Jany*, a non-decorative paste made from the liver of a fish, was used to ward off insects.

Designs included dots, crescents, zig-zags, circles, curves, straight lines, and combinations of these. Quain observed several standard patterns, many of which were symbolic; others were possibly symbolic representations also, but he was unable to learn their meanings.

One man painted crescents on his chest above either nipple which he said represented vaginas. A rattlesnake design consisted of a half ellipse on the flanks with dots in the center. Quain was told that a design of red spots, with two near the nipples ringed in black, was a boa constrictor. Another snake pattern, made by painting zig-zags down the sides and back, was used on one of the posts erected during the *ole* ceremony.
